Application - Full stack developer & designer

Dear Hiring Team,

As a software engineer and designer based in Tunis, I would like to contribute my interface design and development skills to your team. I take projects from initial requirements through to deployment, connecting user experience, business logic and data.

In 2025, I delivered a B2B platform for S.I. GROUPE SÀRL in Switzerland, bringing together a product catalogue, orders, business accounts and PDF documents with Laravel, Vue.js and Firebase.

I am also developing Jahiz, a Flutter and Firebase app for mobility and everyday services. With Twiggy, I work on web and Android games using React, Flutter, Node.js and Firestore. These projects draw on my attention to navigation, interaction and visual consistency, alongside my technical skills.

I can contribute to interface design, feature development and the ongoing improvement of your applications. My portfolio presents my role, the technologies used and demonstrations of my work. I would welcome the opportunity to discuss your needs and how I could contribute to your team.

Yours sincerely,

Rayen Hamdi
